**VANGUARD ENERGY PARTNERS HELPS TOWNSHIP OF TEANECK, NJ
LAUNCH SOLAR ELECTRIC ARRAYS**

Richard Rodda Community Center and Firehouse are Teaneck's First Renewable Energy Projects

TEANECK, N.J., March 11, 2010—Vanguard Energy Partners, LLC, today announced the completion of the Township of Teaneck's first renewable energy projects—a 67 kW solar photovoltaic (PV) system that will help power its Richard Rodda Community Center and a 5.64 kW system that will help generate electricity at Firehouse No. 3.

Vanguard, a leader in the northeast for design and installation of large-scale solar projects, installed 286 roof-mounted Sharp modules that will generate approximately 73,000 kWh of electricity in the first year for the community center. The smaller rooftop installation at Firehouse No. 3 is comprised of 24 Sharp modules that will produce approximately 6,400 kWh in the first year.

The solar PV systems at both municipal facilities will offset energy usage by 11 percent from the clean renewable power of sunlight. In addition to the economic benefits that will help save taxpayer dollars, the solar arrays will reduce CO₂ emissions by 116,688 pounds per year which is the equivalent of saving 6,008 gallons of gasoline.

To help finance the projects, Teaneck received a \$204,944 rebate from the New Jersey Clean Energy Fund. Additionally, the municipality will help raise revenue by selling Solar Renewable Energy Certificates (SRECs).

"We're very excited to bring clean energy to Teaneck. These solar projects will generate electricity that will help reduce energy costs and the township's carbon footprint," said Teaneck Director of Public Works, Charles McKearnin.

Noveda Technologies' SunFlow Monitor™, recipient of the 2007 Market Innovator Award by the New Jersey Clean Energy Program, will track in real time--via the internet--the solar production, facility consumption and system efficiency of the Richard Rodda Community Center to ensure the solar electric system is performing as designed for maximum output. The high-definition monitor will be on public display at the community center.

--more--

“Vanguard is pleased to support Teaneck Township’s commitment to its residents and the environment. We congratulate town officials for furthering New Jersey’s long-term energy goals while minimizing environmental impact,” stated Paul Zensky, president of Vanguard Energy Partners.

About Vanguard Energy Partners, LLC

Vanguard Energy Partners, LLC (www.vanguardenergypartners.com) designs and integrates large-scale solar electric systems for businesses, municipalities and utilities. With operating offices in New Jersey, New York and Florida, Vanguard excels at providing turnkey solar electric solutions for the private and public sectors. With extensive experience in construction, commercial roofing and electrical systems management, Vanguard has completed over 120 solar installations with 10 MW of DC rated capacity.
